InSight™: Designed to Meet Your Hospital's Document Management Needs

If you're thinking of putting your patient medical records and financial information on-line, you need InSight, MSA's cost-effective enterprise-wide document management system. It's the easiest way to give care providers immediate access to patient information, the fastest way to get accounts final billed, and the smartest way to eliminate paper storage of medical records!

MSA and InSight can do more than simply replace microfiche and file cabinets with new technology. We can make it work as a framework for information sharing, with new tools communicating with your current information system to make data more accessible and easier to use, without the expense of replacing your existing information system.

In addition to providing document management solutions to your entire enterprise, InSight is a major component of a complete computerized patient record (CPR). Serving as an electronic medical record, InSight fully integrates with your clinical and financial data repositories and allows quick and easy access to patient care and financial information. The Microsoft Windows® presentation is easy to learn; most functions are accomplished with a single mouse click or keystroke. And because manual access to information has been replaced by automated functions, the imaging and optical environment operates with very little user intervention.

InSight provides your hospital with enterprise-wide access for all complex data acquired from all areas of the facility or community. It protects your facility's investment in your current HIS and other specialized or departmental information systems by providing integrated interface tools for data transfer. The system also provides a standard HL7 transaction interface and supports table driven options for other non-standard interface environments. The ASCII computer generated document interface is provided through a standard report definition interface.

Saint Frances Cabrini, a 264-bed Louisiana hospital and MSA client since 1992, has executed an agreement for full implementation of InSight. Beta testing and implementation will conclude in the first quarter of 1995, with all phases going live by the second quarter.

Smart. Open. Ready. Expandable. Secure. Adaptable. Intuitive. You know you're prepared to meet whatever the future brings. No matter what regulations are issued and what technology enters the market, InSight can accommodate your growing information demands. Build your framework for the future today. Build it with InSight. ■
